ABSTRACT

The purpose of this register is to identify persons working in the field of early childhood education, 1479 listings are included. Each entry gives name, address, present position; education, work in progress and current interest. Twenty five pages of charts categorize specific interest information for each respondent. Listings for the register were obtained as a result of responses to requests for vita information. (AJ)

I Introduction

On May 19, 1970, the U.S. Office of Education contracted the Central Midwestern Regional Educational Laboratory (CEMREL) to administer the National Program on Early Childhood Education (NPECE, formerly the National Laboratory on Early Childhood Education). On June 1, NPECE became one of the four major programs at CEMREL.

The mission of CEMREL's National Program on Early Childhood Education is to contribute to the improvement of early childhood education practice by carrying out those activities which will result in new knowledge about young children and in materials and practices which can be used by those individuals and agencies with responsibility for the education of young children. More specifically, the overriding objective of the Program is to develop comprehensive models for early childhood education:

(a) that are appropriate for installation under a variety of conditions,

(b) that are based upon the best existing evidence concerning the processes which underlie development of competence, and

(c) that are self-correcting as new knowledge is discovered.

The 1969 Research and Development Register in Early Childhood Education was published by the National Laboratory on Early Childhood Education as a first attempt to identify persons working in the field of ECE.

The 1969 Sample Register included 191 investigators from (1) Regional Educational Laboratories, (2) Research and Development Centers, and (3) the

National Laboratory on Early Childhood Education. Evaluation of this listing indicated two prevalent needs within these organizations.

> First, the research and development organizations need to review their staffing patterns in terms of skills required to meet their goals and objectives. Secondly, if staff is not available and is not being trained, these organizations should enter into relationships with universities which would encourage development of training programs to fill the need.[1]

In light of the rapid increase of preschool programs and children's and infant's day care centers, the implications raised by the 1969 Register for research and development organizations pose important considerations for the field of ECE in general.

Unfortunately, the "field of ECE", not having the boundaries of an established organization, does not easily lend itself to evaluation. An initial step in defining the field is to identify those persons currently working in ECE, since investigators may be found, not only in the research and development organizations, but also in colleges, universities, hospitals, community centers, and public and private schools, etc. In short, the field is an expansive one, and current linkage systems presently inadequate, hence it is entirely possible, even probable, that efforts to determine significant methods for improving the education of young children and to develop the necessary programs to provide this education are overlapping where they may not need to be; and findings and new knowledge in ECE are not disseminated as quickly as they should be.

---

[1] Research and Development Register in Early Childhood Education, 1969, p. 7.

In an effort to provide a more complete listing of investigators in the field of ECE and to facilitate the flow of communication within the field, the National Program on Early Childhood Education expanded the 1969 Register. Requests for vita information were sent to select people in AERA, SRCD, APA (Division of Developmental Psychology), ACEI (Research Committee), research projects under NICHD, etc., as well as those organizations represented in the 1969 Register. From this "search" mailing came the 1479 responses listed here. Twenty-five additional vita were returned too late to be included in the current listing.

Although the number of investigators in this listing represents a considerable increase over the 191 persons listed in the 1969 Register, it is not an adequate sample from which to base hypotheses concerning staffing and training patterns for the field in general. Hopefully, continuous expansion of the Register will provide a more adequate sample and at the same time contribute to the development of a more efficient linkage system for early childhood education personnel.

III Identification of Investigators by Work in Progress and Current Interest

The charts on pages 175 through 225 listed each investigator included in the Register. The work in progress and current interest of each investigator who submitted this information on the vita form is categorized on the charts according to the classification scheme explained below. *The charts are devised merely to facilitate the use of the Register. They are not sufficient for analysis purposes.*

The classification scheme is divided into four major categories:

A. Child: This category was designated when the WIP & CI was addressed to specific aspects of child development and/or behavior, i.e., Cognitive, Language, Perceptual, Motivational, Personality, Values, and Physical. The primary category, General Studies, was indicated when the vita information was insufficient for more detailed classification but was clearly addressed to children, i.e., Child Development, Psychological Development. Also included in this category are three descriptive primary categories: Exceptional Children, Infants and Toddlers, and Specific Populations.

B. Physical Environment: This category was designated when the WIP & CI was addressed to specific facits of the physical environment which affect child development and/or behavior. Primary categories included

in this section are: Physical Surrounding, Manipulative Objects, Special Facilities, and Instructional Devices.

C. Research and Development: This category was indicated when the WIP & CI was addressed to specific aspects of research and/or development. The primary categories included in this classification are: Research and Development Methodology, Educational Methods and Philosophy, Program Development and Evaluation, Curriculum Materials Development and Evaluation, Test Construction and Evaluation, Bibliographies of Materials and Surveys of Education. The primary category, General, was indicated when the WIP & CI was insufficient for more detailed classification, i.e., ECE, School Psychology.

D. Human and Cultural Environment: This category was indicated when the WIP & CI was addressed to specific persons or groups of persons who affect child development and/or behavior; or, to specific cultural aspects of the environment. Primary categories included in this section are: Family, Other Adults, Peers, and Cultural Environment.

Each primary category of a major category is broken down into secondary categories with the exceptions of Motivation, Manipulative Objects, Infants and Toddlers, and Bibliographies of Materials and Surveys of Education. Major categories are indicated on the chart by capital letters; primary categories by numerals; secondary categories by small letters. If the primary category is not further delineated, or if the information on the WIP & CI did not allow for this singular distinction, the primary category is indicated.

Example: John Doe

WIP & CI: Tchr tng; dev of puzzles for ch in day care ctr; dev of curr mats; eval of Hd Start & Follow-Through.

Teacher training is coded D-2-c. Development of puzzles is coded B-2-2. Development of curriculum materials is coded C-4-4. Evaluation of Head Start and Follow-Through is initially coded C-3-^{a}/f and appears as C-3-3.

The WIP & CI appears on the chart as shown below:

A. Child											B. Phys Env				C. R&D							D. Human/ Cult Env			
1	2	3	4	5	6	7	8	9	10	11	1	2	3	4	1	2	3	4	5	6	7	1	2	3	4
